

For users of Microsoft Windows Vista® or Windows 7® and 64-bit systems

If you have the Microsoft Windows Vista® or Windows 7® as your operating system you need a plug-in to make the help file in EpiData Entry functional. Visit the appropriate Microsoft web site to get the plug-in required and install it on your laptop:

[Windows Help program \(WinHlp32.exe\) for Windows Vista](#)
[Windows Help program \(WinHlp32.exe\) for Windows 7](#)

The above is sufficient if you have a 32-bit system.

If you have a 64-bit system, you need one additional step. Go to the website:

<http://blog.komeil.com/2009/10/winhlp32-exe-for-windows-7-microsoft.html>

and download the Windows6.1-KB917607-x64.msu file:

- [Browse](#) / [Download](#) Windows6.1-KB917607-x86.msu - Windows Help program (WinHlp32.exe) Installer for Windows 7 32-bit
- [Browse](#) / [Download](#) Windows6.1-KB917607-x64.msu - Windows Help program (WinHlp32.exe) Installer for Windows 7 64-bit

Detail:

- [Browse](#) / [Download](#) Windows6.1-KB917607-x86.msu
- [Browse](#) / [Download](#) Windows6.1-KB917607-x64.msu

Then install it by clicking and following directions.
